WE CELEBRATE 30 YEARS

2016 was special year for the planet, Peru and SPDA. The entering into force of the Paris Agreement and the approval of the Sustainable Development Goals, signaled a breaking point for what is already a change of paradigm in development models. This change involves a different rationale in terms of issues such as energy, transport, forests and water, to name a few. The world of the future will not resemble today's world and, to a great extent, this can already be outlined with dark ink thanks to these critical agreements and international frameworks.

Pedro Solano
Executive Director

It was also a year for changes in Peru at the political level. General elections took place to elect national authorities and representatives before the Congress of the Republic. As always, SPDA promoted the environmental agenda during the electoral debate, in order to inform citizens about the options in the environmental programs of the different candidates and political parties. Elections are always a good opportunity to see the progress made and discuss remaining challenges and opportunities in the face of what is to come.

Finally, we remember 2016 as the year in which we celebrated our 30 years of institutional life. It seems incredible that this dream of handful of law students chatting in a coffee shop in 1986 has consolidated through the years in the institution known today as "SPDA". We celebrated in our style, publishing more than 30 investigations, throughout a 10-day agenda and holding more than 20 events to promote debate and generate academic, legal, journalistic and audiovisual information.

I wish to thank our members and collaborators for their invaluable constancy and trust over time to continue this journey together towards sustainable development. A special thanks to all members of the SPDA family, from yesterday, today and always: for their dedication, joy and commitment to continue the construction of Peru, the country we love.

TEAM SPDA 2016-2017

3 STRATEGIC LINES

NATURAL PATRIMONY

Nature is generous and everything it offers, if managed with good judgement, will transcend to future generations. In SPDA we believe that this is the connecting thread to our development, pride and identity. This strategic line emphasizes natural protected areas (NPAs), forests, landscapes, biological diversity, agrobiodiversity, oceans, ecosystem services, regional conservation systems, water, territory and environmental compensation schemes.

ENVIRONMENTAL JUSTICE

Empowering citizens regarding their environmental rights and strengthening institutions is much more than disseminating, understanding and implementing environmental norms. It involves exercising environmental rights in an informed and effective manner. This strategic line involves the development of case studies or research documents on emblematic issues (including illegal mining, infrastructure or plantations); free legal clinics; participative monitoring and early alert systems; transparency in information; observatories; administrative and legal cases; communication strategies and participation in civil society groups; the Program of Second Specialty in Environmental Law and the Environmental Law Workshop for Undergraduate Students.

INSTITUTIONALITY AND ENVIRONMENTAL LEGISLATION

It is essential to have institutions with capacities in environmental issues and a coherent and systematic environmental legislation framework, as the best guarantee to translate norms into sustainable territorial management and induce concrete opportunities for development.

This strategic line is focused on the analysis and development of proposals of environmental legislation; strengthening the capacity of government institutions at the national, regional and local levels; generating civil society networks; strengthening indigenous groups through legal and technical advice; educational programs and research, among others.

30 YEARS

In 1986 a group of Law students decided to create the Peruvian Society for Environmental Law. Their interest: to promote Environment Law in Peru. Since then, the energy has not stopped. We are aware of the huge challenges ahead and continue to work to pursue a more equitable, sustainable and happy society, with the same joy, curiosity and commitment we started with 30 years ago.

We celebrated our anniversary by conducting a series of meetings on key environmental issues related to the development of Peru: We summarize below a year of important advances and accomplishments.

18 DISCUSSION GROUPS AND ACTIVITIES

Regarding issues such as the environment, climate change, sustainable fishing, environmental journalism, environmental governance, the Amazon, indigenous peoples, natural protected areas, among others

2 PHOTOGRAPHIC EXHIBITIONS

años

“WE NEW FROM THE BEGINNING THAT THE ONLY WAY TO ACCOMPLISH OUR RATHER AMBITIOUS GOALS, SUCH AS ESTABLISHING AN ENVIRONMENTAL LEGAL SYSTEM IN THE COUNTRY, WAS TO DO IT TOGETHER WITH A NUMBER OF INSTITUTIONS. IT HAS BEEN A PROCESS OF KNOWLEDGE AND LEARNING WITH OTHER ORGANIZATIONS ”

JORGE CAILLAUX, PRESIDENT AND FOUNDER OF SPDA

“There are only a few circumstances in the life of country where an institution has such a large impact on the formation of its policies, and that is the case of SPDA. During 30 years it has had a large impact on the formation of environmental policies, and a key role in developing environmental law”

Iván Lanegra, Professor of the PUCP

“SPDA has been promoting better public policies for 30 years, by promoting environmentally aware and sustainable institutions. I highlight the work they have undertaken using science, sound data and legal frameworks to improve decisions in this field”

Elena Conterno, President of the National Fisheries Society

“SPDA and us have an amazing mutual trust based on their leadership, working agenda, and capacity to bring positive results and contribute to public policy both in Peru and the region”

Yolanda Kakabadse, President of WWF International

5 OUR WORK

2016 was an intense year, with multiple activities at various levels. We would like to highlight some of them focused on five issues:

- 1) Strengthening environmental management
- 2) The future of natural protected areas
- 3) Indigenous peoples, management and conservation
- 4) Improved management of forests, wildlife and the oceans
- 5) Protection and defense of environmental rights

STRENGTHENING ENVIRONMENTAL MANAGEMENT

In 2016, SPDA worked in the design of new environmental management instruments and in the legal analysis of environmental assessment and enforcement systems. The purpose is to ensure compliance with environmental standards.

ENVIRONMENTAL IMPACT ASSESSMENT

SPDA continued working to strengthen the National System of Environmental Impact Assessment (SEIA). In this regard, we analyzed the regulatory framework and identified the main challenges in environmental impact assessment processes.

In addition, we also generated proposals for the Global Environmental Certification project, to adequately organize processes and the actions of authorities, to improve the quality of information and final decision of the National Service of Environmental Certification for Sustainable Investments (SENACE).

SPDA presented a proposal to structure and implement a fund to finance technical assistance for communities, to exercise citizen participation during environmental impact assessment processes in mining activities. This tool will help to improve transparency and participation by the community, and thereby reduce socio-environmental conflicts.

3
BOOKLETS

and one legal report containing analyses and proposals to strengthen the National System of Environmental Impact Assessment

ENVIRONMENTAL ENFORCEMENT

SPDA maintained an active role, generating information on a number of issues such as oil spills, the derogation of Law 30230, Article 19 -that weakens environmental enforcement-, and different legislative proposals of SENACE and the Agency for Environmental Assessment and Enforcement (OEFA).

8
LEGAL
OPINIONS

drafts from SENACE
and OEFA

ENVIRONMENTAL COMPENSATION

During the International Union for Conservation of Nature (IUCN) World Congress, we organized a discussion table to exchange views on the efforts being made in countries, to generate information tools and promote environmental and biodiversity compensation schemes.

STRENGTHENING THE REGIONS

At the regional level, SPDA promotes knowledge and discussion spaces, and provides support to strengthen environmental institutions. In 2016, we provided training in Madre de Dios to representatives of regional governments, the academic community, civil society, among others, to strengthen their capacities on environmental matters. We also contributed in the elaboration of key management and internal organizational instruments of the Regional Environmental Authority, the new environmental authority of the Regional Government of Loreto.

ELECTORAL ENVIRONMENTAL AGENDA CONTRIBUTIONS TO THE DEBATE

The electoral campaign and elections of new authorities in 2016 presented a great opportunity to promote the debate of ideas of environmental policies in Peru. A survey undertaken by IPSOS in February 2016, revealed that only 13% of respondents consider the environment a priority issue on the electoral agenda. Considering this result, SPDA sought to contribute to elevate the environmental dimension throughout the national political campaign.

SPDA reviewed government plans by candidates to the Presidency and evaluated their environmental component. Additionally, we promoted a dialogue with political parties through interviews with their environmental experts. We also participated in different forums such as

Sustainability: Environment and Climate Change, organized by Grupo La República y Latina; How to face climate change in Perú?, organized by The Driving Group Against Climate Change in Peru (Grupo Impulsor) of which SPDA forms a part; and the Forum on Forestry Management.

This work was accompanied by an important component of dissemination through the media and social networks.

60
PROPOSALS

were developed for the
future environmental agenda

2016 ELECTIONS

SPDA POSITIONED A SERIES OF ENVIRONMENTAL ISSUES IN THE POLITICAL AGENDA

5 analyzed themes

Key government plans of the main political parties were analyzed and grouped in 5 environmental themes.

2 publications with proposals

Analysis enabled the generation of proposals for the Executive and Legislative Branches.

20 interventions in the media

SPDA staff participated in national media to disseminate proposals.

Actualidad Ambiental of SPDA interviewed representatives of Peruanos por el Cambio and Frente Amplio. SPDA also participated in 4 academic forums.

Dialogue with political parties

THE FUTURE OF NATURAL PROTECTED AREAS

During 2016, we provided technical assistance to the National Service of Natural Protected Areas by the State (SERNANP) in the design and implementation of a Sustainable Funding Strategy, an essential step for the management and the future of Natural Protected Areas (NPAs). In addition, innovative initiatives were presented such as the proposal to articulate a network of natural monuments in Peru. There are still a number of challenges for these emblematic areas of our biodiversity and natural heritage; one of these is the advancement of illegal mining.

FINANCIAL SUSTAINABILITY FOR CONSERVATION

As part of the financial sustainability initiative for NPAs “Peru’s Natural Patrimony”, we participated in the implementation of the first Funding Plan for Natural Protected Areas by the State (SINANPE). This document was approved through Ministerial Resolution 200-2016-MINAM. As part of this Plan, more than twenty funding mechanisms were identified, four of which have been prioritized by SERNANP.

NETWORK OF NATURAL MONUMENTS

The results from a feasibility study for the implementation of a network of natural monuments in Peru were presented to SERNANP. This network will allow the articulation, development and recognition of icons of the environment, which have been historically essential for Peruvians, such as millenary trees, caves, waves, waterfalls, stone forests and mountains, among others.

MANAGEMENT COMMITTEES FOR NATURAL PROTECTED AREAS

Management committees are voluntary citizen participation spaces of significant importance for the management of natural protected areas. SPDA implemented tools to support the people and institutions that volunteer in monitoring, protecting, conserving and promoting environmental education actions, among other activities related to NPAs.

In this area, we contributed to the establishment of a Trust Fund for the Tambopata National Reserve Management Committee, the first trust formed to channel funds to finance activities in this reserve. Additionally, we elaborated a number of studies on the situation of the most representative SINANPE management committees, in terms of the threats they face, opportunities, strengths, weaknesses, and organizational, technical and financial needs.

ILLEGAL MINING IN NATURAL PROTECTED AREAS

Natural Protected Areas (NPAs) constitute one of the great pillars of our national pride. However, in spite of their importance, they are being constantly threatened by the development of illegal activities such as illegal mining.

As a result, we have been working for several years on communication strategies, analysis and proposals to strengthen the fight against illegal mining, as a State policy, generating a social consensus regarding this problem. 2016 was not the exception. The main activities developed were the following:

- The design of a draft legal tool to facilitate the control, monitoring and sanctions for illegal mining in NPAs.
- The implementation of programs and modules in coordination with the Ecological Police, Environmental Prosecutors and Public Attorneys, among others, to strengthen the capacities of SERNANP members, NPA leaders and Management Committees, to deal with illegal mining.
- SPDA launched a communications campaign “Somos Tambopata” aimed towards protecting the Tambopata National Reserve from illegal mining. As part of this campaign, renowned local artists gathered to generate a call to action through the theme and video clip “El Futuro es Verde”.
- Likewise, we presented a journalistic investigation on the impact of illegal mining in five NPAs where this activity takes.

WE CONSERVE BY NATURE (CxN)

2016 has been a year of great results and advances for We Conserve by Nature, an SPDA initiative that focuses on voluntary conservation and citizen activism in favor of nature conservation.

DO IT FOR YOUR WAVE

This crowdfunding platform, one of the first in Peru, succeeded in raising two hundred thousand soles on the part of companies and citizens interested in the protection of waves in Peru. The campaign has managed to articulate various actors such as the Peruvian Navy, the National Surfboard Federation and SPDA, together with athletes, citizens, businessmen, institutions and local governments interested in the conservation of our sea.

THE NATURAL ROUTE

We published the first guide on travelling to private conservation areas (PCAs) in Peru: "La Ruta Natural: Viajes y Destinos Conservamos por Naturaleza" and a new section "Explora" at www.conservamospornaturaleza.org that includes key information for those interested in contact with nature.

Additionally, we implemented a Strategic Plan for tourism in the Amazon PCAs, providing sustainable funding for voluntary conservation.

DO IT FOR YOUR BEACH

In its fourth edition and during a weekend in March, the campaign Do it for your Beach convened more than two thousand volunteers, who cleaned up our beaches to raise awareness for vacationers on plastic pollution in our seas and rivers. Cleanup campaigns in eight countries at a global level were implemented this year.

2173
VOLUNTEERS

17.5 tons of garbage

WE REFOREST BY NATURE

This campaign which encourages the adoption of trees to promote private conservation initiatives, continues to expand. With funds raised, three projects were successfully executed in the PCAs Milpuj - La Heredad and Bosque Berlín and Asociación Bosques del Futuro Ojos de Agua, focused on improving tourist attractions and lodges in the areas, reforestation and production centers of eco-products. Funds raised in 2016 were invested in these three areas in addition to PCA Paraíso Natural Iwirati.

SCHOLARSHIPS CONSERVE PERU

Twelve students and young professionals elaborated projects in support of voluntary conservation areas for a value equal to fifteen thousand soles. The scholarship awardees conducted several activities according to the needs of each area, such as preparing files to create new private conservation areas in Loreto, coordinating the campaign Remando Jutos por el Mara  n, or the planting and coding of trees for the campaign We Reforest by Nature.

NETWORK OF VOLUNTARY CONSERVATION INITIATIVES IN THE AMAZON

In 2016 we were able to expand our support of the Network of Voluntary Conservation Initiatives in the Amazon by hiring a coordinator to assist in project planning, legal matters and the purchase of equipment.

PRODUCTS FROM CONSERVATION AREAS

2016 was a very positive year regarding the promotion of products from private conservation areas. Through our alliance with a social enterprise Shiwi and the diversification of sales points, from 2015 to 2016 it was possible to increase sales from fifteen thousand to more than ninety thousand Soles. Profits above fifty one thousand Soles were generated for PCAs.

CARNET CXN

Through alliances with forty-five companies, we introduced the new I.D. Card We Conserve by Nature. This card is an incentive for those who want to support voluntary conservation initiatives and provides discounts and benefits. The card costs twenty Soles, and funds are assigned to CxN projects.

INDIGENOUS PEOPLES, MANAGEMENT AND CONSERVATION

The management of land and social conflicts, as well as the recognition of ancestral knowledge, are undoubtedly essential aspects towards the strengthening of Indigenous Peoples rights. In 2016, we analyzed issues related to the review of the physical-legal status of indigenous territories; we worked at the local and regional levels in the design and implementation of a strategy to manage and transform socio-environmental conflicts, and contributed to research and the legal framework related to agrobiodiversity and ancestral knowledge.

LAND MANAGEMENT

SPDA contributed to the physical-legal review of indigenous territories, and our support contributed to improving policy orientation and national regulation. Due to this work, the Samito and Santa María peasant communities were provided land entitlement. Furthermore, we are part of the Advisory Committee of the Rural Land Cadastre, Titling and Registration Project in Peru.

We provided advice to several land demarcation and entitlement processes for native communities, and supported the delimitation and entitlement of land of peasant communities. We offered training to Indigenous Peoples with regard to land management from a sustained approach of their rights.

In October we published “Una Primera Mirada: Situación Legal de la Tenencia de Tierra Rurales en el Perú” (Legal Tenure of Indigenous Peoples Lands), a document that analyzes different reforms regarding land entitlement in our country and identifies the problem surrounding governance, institutionalism and procedures established for the access to rural property, in addition to proposing improvements for the access to private and collective rural property. This publication features an audiobook version in Spanish and Quechua.

Listen to the audiobook
here

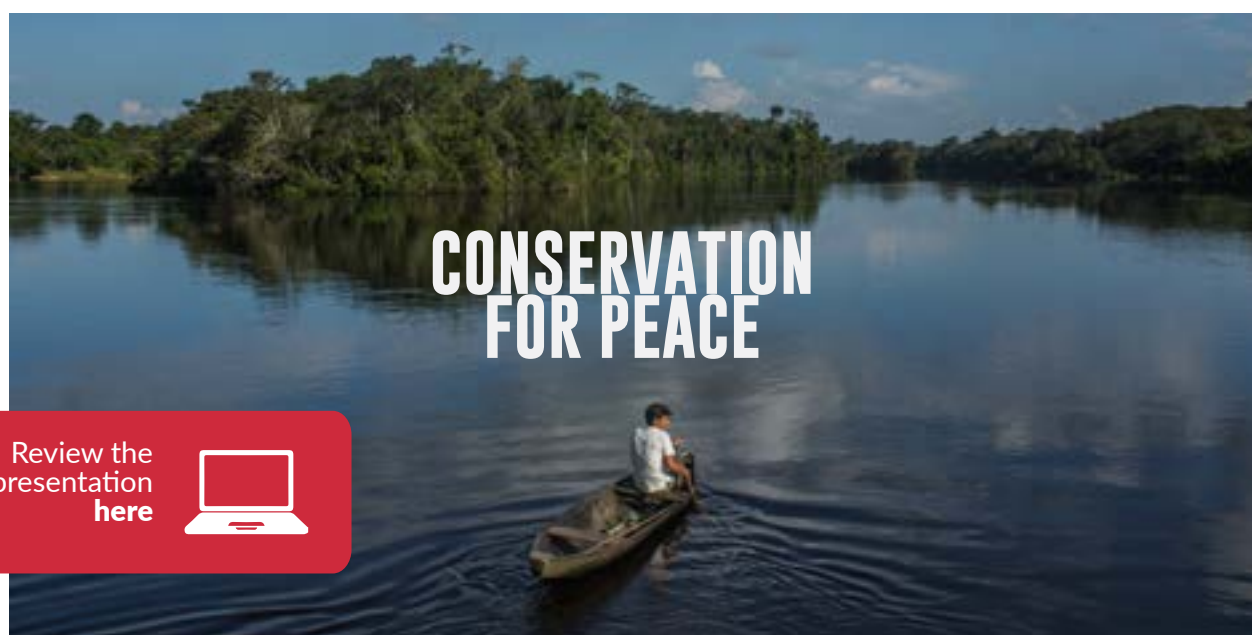

CONSERVATION FOR PEACE

The Conservation for Peace project was implemented in September 2014 until December 2016, in the influence zone of the Alto Nanay Pintuyacu Chambira Regional Conservation Area and the Allpahuayo Mishana National Reserve buffer zone. We worked with communities of Samito, Santa María, Diamante Azul, San Juan de Ungurahual and Pucaurco, all of them located in the District of Alto Nanay, Province of Maynas (Loreto).

The project focuses on working on social conflicts from a communal level. In all, a total of twenty-four conflicts related to the use of and access to natural resources linked to issues such as communal land use, logging, territorial limits, lack of access to information, absence of an alert system and natural resources management were addressed.

For the management and transformation of conflicts, we provided training for twenty-three local leaders of five communities, recognized as Agents of Peace. Additionally, with the support of regional authorities, we implemented an Early Warning System in Loreto, intended to identify conflicts linked to the use of natural resources, and the Regional Office for Dialogue and Conflict Management in this region.

Through the song “Mejor es Dialogar”, interpreted by the legendary Cumbia band Los Wemblers, the project's message was expanded to social networks and local media in Loreto. Experiences were identified through different audiovisual products such as two multimedia reports, a documentary and photographic display.

IT IS BETTER TO DIALOGUE

Through the song “Mejor es Dialogar”, interpreted by the legendary Loreto Cumbia Amazon band Los Wemblers, the projects message in a simple manner reached groups targeted in the project. The song was broadcast by top radio stations in the region.

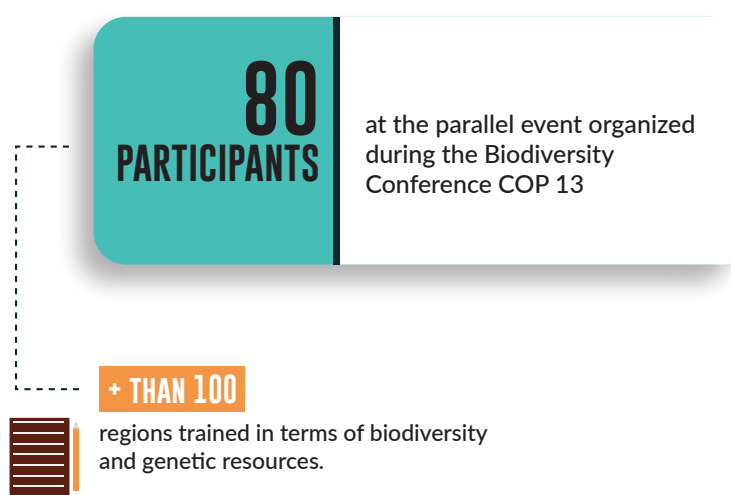

AGROBIODIVERSITY AND TRADITIONAL KNOWLEDGE

We continued with our work contributing to research and dissemination with regards to genetic resources. Along these lines, we organized the parallel event “Genetic Resources as Natural Information, during the thirteenth meeting of the Conference of Parties (COP) to the United Nations Convention on Biological Diversity, that took place in Mexico.

Another important accomplishment was the adoption, after more than seven years, of the regulation that creates and recognizes agrobiodiversity zones. We worked the original draft together with social institutions such as INIA and IDMA. As a result, at least five sites rich in agrobiodiversity were immediately benefited at the possibility of being

recognized as an agrobiodiversity zone (e.g. Pariahuanca, Laria, Lares, Sapuena and Flor de Castaña, among others).

Finally, we completed training and awareness workshops in four cities (Iquitos, Tarapoto, Arequipa, Piura) on access to genetic resources and intellectual property, as part of the GIZ ProAmbiente Program.

IMPROVED MANAGEMENT OF FORESTS, WILDLIFE AND OCEANS

Our work focused on providing support to strengthen the tools and institutions in charge of forest management. SPDA also began work contributing to the fight against illegal wildlife trade. We promoted the establishment of a Reserved Zone Mar Pacífico Tropical and improved the normative framework for artisanal fishing and the control of illegal fishing activities.

FOREST INSTITUTIONALITY

After supporting the approval of four regulations of the Forestry and Wildlife Law in 2015, we provided advice to the State, mainly to the National Forest and Wildlife Service (SERFOR), on the elaboration of complementary norms, to adequately implement the regulations. The issues covered were related to the custodians of forest patrimony, concessions in the use of agroforestry, deforestation and land use change, sanctioning procedures, among others.

A significant achievement was the election of representatives of civil society organizations before the SERFOR Directive Council. SPDA and Proética facilitated this participative process.

ENVIRONMENTAL IMPACTS IN THE FORESTRY SECTOR

We participated in the process to elaborate the National Plan for Oil Palm, emphasizing the need to clarify the environmental and agricultural legal frameworks, mainly on issues related to the environmental certification of agricultural investments in Amazon

territories, as well as strengthen the regime to access agricultural land in the Amazon. All these observations were formally presented to the Ministry of Agriculture and Irrigation and discussed in different regional workshops.

REDD+ IN PERU

SPDA supported the Ministry of Environment in the elaboration and approval of a draft Regulation of the Law of Retribution of Ecosystem Services, published in July 2016.

Additionally, we worked on the elaboration of guideline proposals and complementary norms in terms of ecosystem services linked to the forestry sector, such as the REDD+ register and norms on forest cover monitoring.

Like previous years, we implemented a survey to systematize and monitor investments in Peru on REDD+ through the support of the REDDX Tracking Expenditures platform.

FIGHT AGAINST THE ILLEGAL TRADE OF WILDLIFE

In 2016, SPDA initiated actions related to the illegal trade of wildlife, mainly on the Peru – Ecuador border, from a public policy perspective and legislation. We conducted a legal analysis of the issue, including analysis of national and foreign legislation.

In alliance with the Wildlife Conservation Society (WCS), we coordinated joint efforts between SERFOR, the Public Ministry and forest authorities in Tumbes, Piura and Lambayeque, the Ministry of Foreign Affairs and Ecuadorian authorities, to address problems of the transboundary illegal trade of wildlife in both countries.

SPDA contributed by placing the issue on the policy agenda, disseminating the problem through *Actualidad Ambiental* and participating in workshops in Tumbes, Piura, Lima and Iquitos.

INTEGRATED MANAGEMENT OF THE SEA IN PERU

In 2016, SPDA began research and analysis work focused on the support of legal and policy reform processes, necessary for the responsible management of fisheries and marine conservation in Peru. The establishment of alliances and coordinated work with institutions of civil society, experts and authorities has been a key task for this first stage. Additionally, we worked to disseminate the importance of conserving the Tropical Pacific Sea of Peru on the coast of Piura and Tumbes

THE PROTECTION AND DEFENSE OF ENVIRONMENTAL RIGHTS

Environmental rights and access to environmental justice ensure the protection and defense of other fundamental rights such as rights to a healthy and balanced environment, the collective rights of indigenous peoples, the right to public health, among others. In this regard, during 2016, we continued to work in favor of the active exercise of these rights, through Legal Clinics and the Alerta Ambiental platform

ACCESS TO ENVIRONMENTAL JUSTICE

Through the Legal Clinics in Madre de Dios and Loreto, we continued to receive and attend several consultations linked to issues such as the use of natural resources, land management, illegal activities, among others.

We organized six training workshops with SPDAs Free Legal Clinic in Madre de Dios on issues of access to environmental justice, targeted to forest users: forest concessionaries, members of native communities, holders or owners of agricultural land and members of the Tambopata National Reserve Management Committee.

In the case of Loreto, we undertook coordinated work with Public Prosecutors specialized in Environmental Matters

and the Police, for the execution of raids related to wildlife illegal trade, the management of wildlife in captivity, among others. Additionally, SPDA participated in several training workshops both for public officials and for the public at large, in terms of the conservation of natural resources and environmental protection, offering expert opinions to the regional press on issues such as air contamination, among others.

276
CONSULTATIONS

and 18 new cases were attended by the Free Legal Clinics in Madre de Dios, Loreto and Lima.

THE ENVIRONMENTAL ALERT PLATFORM

In its fourth year, Environmental Alert has become a key issue for SPDAs work on environmental justice. This tool, that helps to monitor citizens' environmental complaints, has focused on claims made by forest users affected by illegal activities in Madre de Dios.

**25
NEW
COMPLAINTS**

registered in
altertaambiental.pe
during 2016

In 2016 SPDA introduced a process to expand the scope of Alerta Ambiental to new zones in Madre de Dios, for example, the sector where chestnut activities take place. Furthermore, in 2017 we initiated an interesting process to evaluate the implementation of Alerta Ambiental in Piura, allowing the platform to act in a different ecosystem: the marine coastal zones.

INFORMATION ON ENVIRONMENTAL RIGHTS

In 2016, SPDA continued to inform citizens of their environmental rights, seeking to contribute to their effective application. First, we participated as a focal point for the Peruvian civil society and provided technical support to the Ministry of Environment during the negotiation process for the adoption of a regional instrument that would allow the effective implementation of Principle 10 of the Rio Declaration on Environment and Development on access rights. We also worked collaboratively with several organizations in the region in the collation denominated "The Access Initiative".

Related to this matter, we launched three publications, including an analysis of cases on environmental impact assessment processes in six Latin American countries. These publications together with the six launched in 2015 were granted the National Environmental Award presented by the Ministry of Environment.

The digital version can be downloaded [here](#)

6 COMMUNICATIONS

CONSTANT ENVIRONMENTAL INFORMATION

In a world where an abundance of information is available, one must seek out the most innovative products and channels in order for relevant analysis and information of interest to reach a greater number of people. Here are the efforts of SPDA in an attempt to count on more citizens aware of the environment.

NEWS DAY BY DAY

Through our social networks and news portals, SPDA generates and shares information of interest related to the environment for all Peruvians. Our news portal ActualidadAmbiental.pe reached an average of 42 thousand visits a month during 2016, with a total of 1'319 357 pages visited. Cambia.pe, our news portal related to climate change and a more environmentally friendly lifestyle with the planet, reached an average of 12 thousand visits a month.

MULTIMEDIA SPECIALS VIDEOS AND DOCUMENTAIRES

In 2016, SPDA published four multimedia specials, which allowed histories to be narrated and the dissemination of information through a number of tools such as photographs, videos and infographics, to raise awareness of the most relevant conservation efforts and environmental problems.

The multimedia specials were: Mar Pacífico Tropical Peruano, synthesizing the importance of conserving the sea in Piura and Tumbes, and our impressive photographs on biodiversity in the zone; Minería y Fiebre de Oro in Madre de Dios, containing stunning images and statistics on deforestation in the Amazon; Conflicto en la Quebrada, a report that narrates the existing conflict

between two communities in Loreto; Agents of Peace, that recounts the history of how five communities of Alto Nanay learned to manage their conflicts.

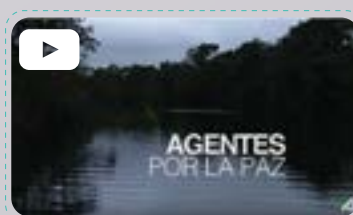

We also worked on the development, production and publishing of a documentary "Agents of Peace" that narrates the history of communal leaders that changed their attitude and behavior in order to strengthen dialogue with their authorities and neighbors, and thereby reduce socioenvironmental conflicts in their communities.

CAMPAIGNS

In 2016, SPDA undertook two campaigns and a Hackathon that allowed us to reach different audiences with concrete messages.

#SOMOSTAMBOPATA

The campaign #Somos Tambopata proposes a positive change when facing the challenge presented by illegal mining: we must work together on finding a solution to the advancement of illegal mining.

To this effect, actors, musicians and singers were convened to interpret the song "The future is green", a theme that intends to transmit the mix of anger and hope. Anger for what is happening at the important National Reserve, and hope due to the existence of people and institutions that are committed to defend Tambopata, through proper conservation.

This campaign also emphasized the history of people who are committed to the sustainable development of Tambopata National Reserve and disseminated through social networks, data to inform and raise awareness among citizens.

RESPONSIBLE CONSUMPTION

In alliance with B-Green and Food Bank of Peru, SPDA organized a campaign on the responsible consumption of food, in order to sensitize Peruvians on the impacts from food wastage in our environment and society.

Thanks to the support of the Municipality of San Isidro, an event "Think.Eat.Save" took place at Parque Caceres, where renowned chefs such as Palmiro Ocampo, Diego Muñoz and Wilfred Dass met and prepared dishes with food that is often discarded.

During the event, discussions were took place on food security and food wastage, and gastronomic demonstrations were conducted.

In addition, SPDA participated in a new edition of Pecha Kucha Night Verde that addressed the issue of responsible consumption, with the presence of hundreds of people.

HACKATHON FOR THE AMAZON

86 young students presented 20 technological solutions to solve problems linked to forests, natural protected areas and illegal mining.

The Hackathon was organized by SPDA and ESAN University, with the support of the Ministry of Environment, Municipality of San Isidro, SAP and Internet Bar Organi

¿RECUERDAS DÓNDE TE ENAMORASTE DEL PERÚ?

#AMORNATURALPORELPERÚ

The campaign invites Peruvians to reflect on the importance and beauty of natural protect areas, as well as how to increase awareness and respect for natural protected areas in Peru.

This campaign, implemented in coordination with SERNANP, reached more than seven thousand people, through Cabina del Recuerdo, where many adults, youngsters and children remembered their visits to different national parks, reserves, among others.

OUR PROJECTS

Funder	Project Name	Objective	Time of execution
Private International Foundations			
Andes Amazon Fund	Strengthening the governance, development and support for natural protected areas in Peru	Create enabling conditions to strengthen conservation systems in Peru; as well as provide legal and technical assistance to create new conservation areas in Peru.	June 2016 – June 2017
Blue Moon Fund	Strengthening the governance, development and support for natural protected areas in Peru	Create enabling conditions to strengthen conservation systems in Peru; as well as provide legal and technical assistance to create new conservation areas in Peru.	June 2015 – May 2016
Gordon and Betty Moore Foundation	Conservation and consolidation of protected areas and indigenous territories within the Purús-Manu mosaic	Consolidate the management of natural protected areas and indigenous territories in the Purús-Manu mosaic and improve the protection and conservation levels of indigenous peoples in isolation, and initial contact through capacity building for those responsible of their administration, as well as a normative framework to ensure adequate management.	November 2016 – January 2019
Gordon and Betty Moore Foundation	Strengthening the Environmental Impact Assessment System in Peru: consolidation of the National Service of Environmental Certification for Sustainable Investments (SENACE)	Strengthen the Environmental Impact Assessment System at the national level, to improve the management of impacts of large-scale infrastructure projects in Peru, including the consolidation of SENACE.	November 2013 – June 2016
Gordon and Betty Moore Foundation	Strengthening the System of Natural Protected Areas (SINANPE) and consolidating conservation strategies at the Government level and civil society	Ensure biodiversity conservation and management of Natural Protected Areas in the Peruvian Amazon, strengthening the System of Natural Protected Areas and consolidating regional institutionalality in Loreto, as well as civil society.	August 2014 – August 2017

Gordon and Betty Moore Foundation	Reducing the threats through the consolidation of regional environmental institutional and participation of civil society in Madre de Dios	The project seeks to strengthen regional environmental institutional and empower both authorities and civil society in Madre de Dios, for effective environmental management through the protection and conservation of our natural resources.	November 2014 – June 2017
Mac Arthur Foundation	Response to the increasing loss of biodiversity due to productive activities in the Amazon, through input and appropriate use of information and studies	Improve institutional and legal frameworks in order to make sustainable investments in Amazon areas, suitable for agricultural and agro-industrial projects, related to the management of areas used for intensive agriculture or potentially affected by this type of agriculture and investments.	January 2016 – December 2018
Mac Arthur Foundation	Strengthening access to environmental justice to discourage illegal activities that threaten the conservation of forests and biological diversity in the Southern region of Peru	Address the social and economic dynamics that undermine the tropical forests and biodiversity in the Madre de Dios region, strengthening access to environmental justice to discourage illegal activities that threaten forests, and promote biodiversity conservation.	January 2013 – March 2016
New England Biolabs Foundation - NEBF -	Examples to follow in the Amazon Basin: support for conservation efforts in the native community of Puerto Prado, Loreto	Support conservation efforts in the native community of Puerto Prado.	August 2015 – August 2016
Walton Family Foundation	Towards sustainable fishing in the first five nautical miles in Peru	Provide the necessary legal and policy information to support the sustainable management of fisheries in Peru.	December 2016 – September 2017
	Participative monitoring and early alert for an effective response to threats against forests in Madre de Dios – Third Phase	Consolidate participative monitoring as a tool to facilitate the access to environmental justice for communities affected by illegal activities in Madre de Dios.	September 2015 – September 2016

Tides Foundation -Patagonia	Save the waves of Peru - Do it for your wave	Protect the waves of Peru through the citizen campaign "Do it for your Wave", by supporting mechanisms created by the Law on the Protection of Waves.	February 2016 - March 2017
-----------------------------	--	---	----------------------------

International Governments

US Fish and Wildlife Service	Fighting illegal wildlife trade in Peru, by empowering local authorities, civil society and communities in the Amazon, Loreto, Ucayali and San Martin	Reduce illegal wildlife trade through training for regional authorities, and a communication campaign at the local level.	September 2016 - September 2017
------------------------------	---	---	---------------------------------

US Forest Service	Supporting the regulation process of the Forestry and Wildlife Law No. 29763	Legal support on issues related to public management and atechanical and normative framework aimed towards facilitating the implementation of public policies approved.	November 2014 - October 2019
-------------------	--	---	------------------------------

USAID	Conservation for Peace	Prevent and transform the conflicts related to the use of natural resources within Alto Nanay Pintuyacu Chambira Regional Conservation Area.	September 2014 - December 2016
-------	------------------------	--	--------------------------------

Other International Organizations

Climate and Development Knowledge Network - CDKN	Regional Communications Strategy for Latin America - Year 7	Continue with the positioning of CDKN at the national and regional levels, through a communications strategy and the implementation of diverse products and activities.	May 2016 - March 2017
--	---	---	-----------------------

Development Knowledge Network - CDKN	Regional Communications Strategy for Latin America - Year 6	Continue with the positioning of CDKN at the national and regional levels, through a communications strategy and the implementation of diverse products and activities.	May 2015 - March 2016
--------------------------------------	---	---	-----------------------

Development Knowledge Network - CDKN	Training for Latin American journalists on the implementation of NDCs.	Build and implement the knowledge of Latin American journalists in order to improve the coverage of environmental matters and climate change, with a particular approach on National Determined Contributions (NDCs).	May 2016 - December 2016
--------------------------------------	--	---	--------------------------

Critical Ecosystem Partnership Fund	Strengthening the community and private conservation in the Northeast Conservation Corridor of Peru	Biodiversity conservation in the Department of Amazonas in the Northeast Biodiversity Corridor, through a network of private conservation areas (PCAs) that may use the private conservation legal framework for their benefit, attaining financial stability through business initiatives and fundraising.	July 2016 – June 2018
Environmental Defense Fund - EDF	Analysis of the law and policy situation related to sea fishing in Peru	Elaborate a report on the state of sea fishing in Peru.	August 2016 – April 2017
GITEC	Fair and equitable sharing of benefits arising from the use of biological diversity in Mexico	Provision of services in the framework of the project "Biodiversity governance - fair and equitable sharing of benefits arising from the use and management of biological diversity".	June 2015 – December 2017
GITEC (PROAMBIENTE)	Contribution to environmental objectives of Peru - ProAmbiente	Provision of services in the framework of the project "Contribution to Environmental Objectives of Peru (ProAmbiente)".	January 2014 – December 2016
Global Canopy	Contribution to the establishment of the Mismi reserved zone	Consolidate the protection of Mismi included in the National System of Protected Areas.	April 2016 – July 2016
Rights and Resources Group	Proposals to improve the entitlement of native and peasant communities in Peru	Generate articulated proposals and workspaces with the governing body and institutions involved, to clarify and simplify the demarcation procedures, formalization and certification of peasant and native communities, by Regional Governments.	March 2016 – December 2016
Rights & Resources - The International Land and Forest Tenure Facility	Legal certainty of territories of Native Communities in Madre de Dios and Cusco	Contribute to strengthening the adequate management of natural resources and the capacity to exercise collective rights in beneficiary communities.	October 2015 – December 2016
Wildlife Conservation Society - WCS (USAID)	Biodiversity, livelihoods of local communities and governance in Loreto and Manu Tambopata landscapes	Improve the quality of life of rural communities, conserve biodiversity and promote the sustainable use of natural resources in two of most important ecological landscapes of the Andean Amazon: Loreto and Manu Tambopata (Peru).	October 2011 – September 2016

Wildlife Conservation Society	Strengthening capacities and cooperation to combat wildlife illegal trade networks in Latin America and Southeast Asia	Contribute to strengthen the capacity of police and criminal justice officers related to wildlife illegal trade, to improve transboundary investigations for the exchange of information and design a pilot training program.	February 2016 – June 2017
Amazon Conservation Association (NORAD)	Creation of capacities to monitor deforestation and forest governance to help address the REDD+ objectives in the Peruvian Amazon	Contribute to the implementation of REDD+ policies and development of social and environmental practices by actors in the private sector.	December 2016 – December 2020
Profonanpe	Mitigation of deforestation in chestnut concessions in the Madre de Dios Region	Elaborate and put into effect a local monitoring and control pilot system including a participative monitoring mechanism and technological platform of early alert that would entail concrete and effective actions for the conservation of chestnut forests in the Algeria sector of Madre de Dios.	October 2016 – October 2017

SPDA AGREEMENTS

Institution	Type of institution	Objective	Period
Congress of the Republic	Public	Establish a collaborative framework between the two institutions through the Working Group on Climate Change and Biodiversity – Globe Peru of the Congress of the Republic, for the implementation of common interest projects and activities linked to climate change and biodiversity.	October 2014 – October 2016
Regional Government of Amazonas	Public	Contribute to strengthen Regional Government capacities to successfully exercise their responsibilities in terms of the environment and the sustainable management of natural resources.	April 2007 – January 2016
Regional Government Loreto	Public	Contribute to strengthen Regional Government capacities to successfully exercise their responsibilities in terms of the environment and the sustainable management of natural resources.	July 2015 – July 2017
Regional Government of Madre de Dios	Public	Contribute to strengthen Regional Government capacities to successfully exercise their responsibilities in terms of the environment and the sustainable management of natural resources.	August 2008 – June 2016
Regional Government of Piura	Public	Contribute to the specialization of their human resources in matters related to environmental impact assessments and environmental monitoring in the area of Regional Government responsibility, and in accordance with norms set by the National System of Environmental Management, National System of Environmental Impact Assessment and National System of Environmental Assessment and Enforcement.	August 2014 – August 2016
Institute of Investigations in the Peruvian Amazon (IIAP)	Public	Contribute to maintaining a permanent support of concrete problems in terms of the environment, humanity and society, orienting studies and investigations towards the solution of such problems. Priority will be given to the application of environmental policies and norms for biodiversity conservation, social development and sustainable use of natural resources.	May 2013 – May 2018
National Institute for the Defense of Free Competition and the Protection of Intellectual Property (INDECOPI)	Public	Promote the strengthening of capacities and adequate dissemination of the Regime on Access to Genetic Resources and its relationship with the Intellectual Property System, under the administration of INDECOPI.	March 2015 – March 2016
Ministry of Environment	Public	Provide technical assistance to MINAM on the implementation of the National Service of Environmental Certification for Sustainable Investments (SENACE).	February 2010 – February 2018

Ministry of Environment	Public	Implement mechanisms and joint work instruments that would allow parties to unite efforts and available resources to strengthen the National System of Environmental Management.	February 2010 – February 2018
Alto Nanay District Municipality	Public	Coordinate efforts and available resources in order to generate settings for change and the pacification of socio-environmental conflicts.	August 2015 – September 2016
Provincial Municipality of Tambopata	Public	Determine synergies that contribute to strengthen environmental management in the Province of Tambopata, in such a way, that the Municipality may exercise its competences and responsibilities with respect to environmental matters.	October 2016 – September 2017
Forest and Wildlife Resources Supervisory Organism (OSINFOR)	Public	Promote the development of sustainable use of forest and wildlife resources and contribute to improving the technical quality of human resources and forest and wildlife management in different procedures according to their competence.	April 2014 – April 2016
Judicial Power of Peru – Loreto Superior Court of Justice	Public	Contribute to strengthening capacities of the Court to successfully exercise its responsibilities regarding environmental matters	March 2015 – March 2017
Commission for the Promotion of Peru in Exportation and Tourism (PROMPERU)	Public	Contribute to promoting the country's image in the framework of activities and products associated to the country brand Peru and care for the environment.	November 2014 – November 2016
National Service of Natural Protected Areas by the State (SER-NANP)	Public	Join efforts and available resources focused on three main issues: 1) Strengthening the National System of Natural Protected Areas by the State; 2) the conservation and sustainable use of biological diversity in natural protected areas under national and regional administration and private initiatives; 3) the promotion and development of ecotourism activities and environmental services.	May 2016 – April 2021

National Service of Environmental Certification for Sustainable Investment (SEN-ACE)	Public	Undertake joint activities that will contribute to strengthening the National System of Environmental Impact Assessment (SEIA) for public, private or mixed capital investment sustainability.	July 2015 – July 2019
National Forest and Wildlife Service (SERFOR)	Public	Promote consolidated forest and wildlife institutionalality and a clear, transparent and useful legal framework for the sustainable management of forest and wildlife patrimony.	September 2015 – September 2019
