61 Directive Council

62 Organizational Chart

Dear readers,

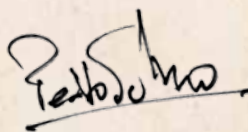

I am pleased to present the 2013 fiscal year Annual Report of the Peruvian Society for Environmental Law (SPDA).

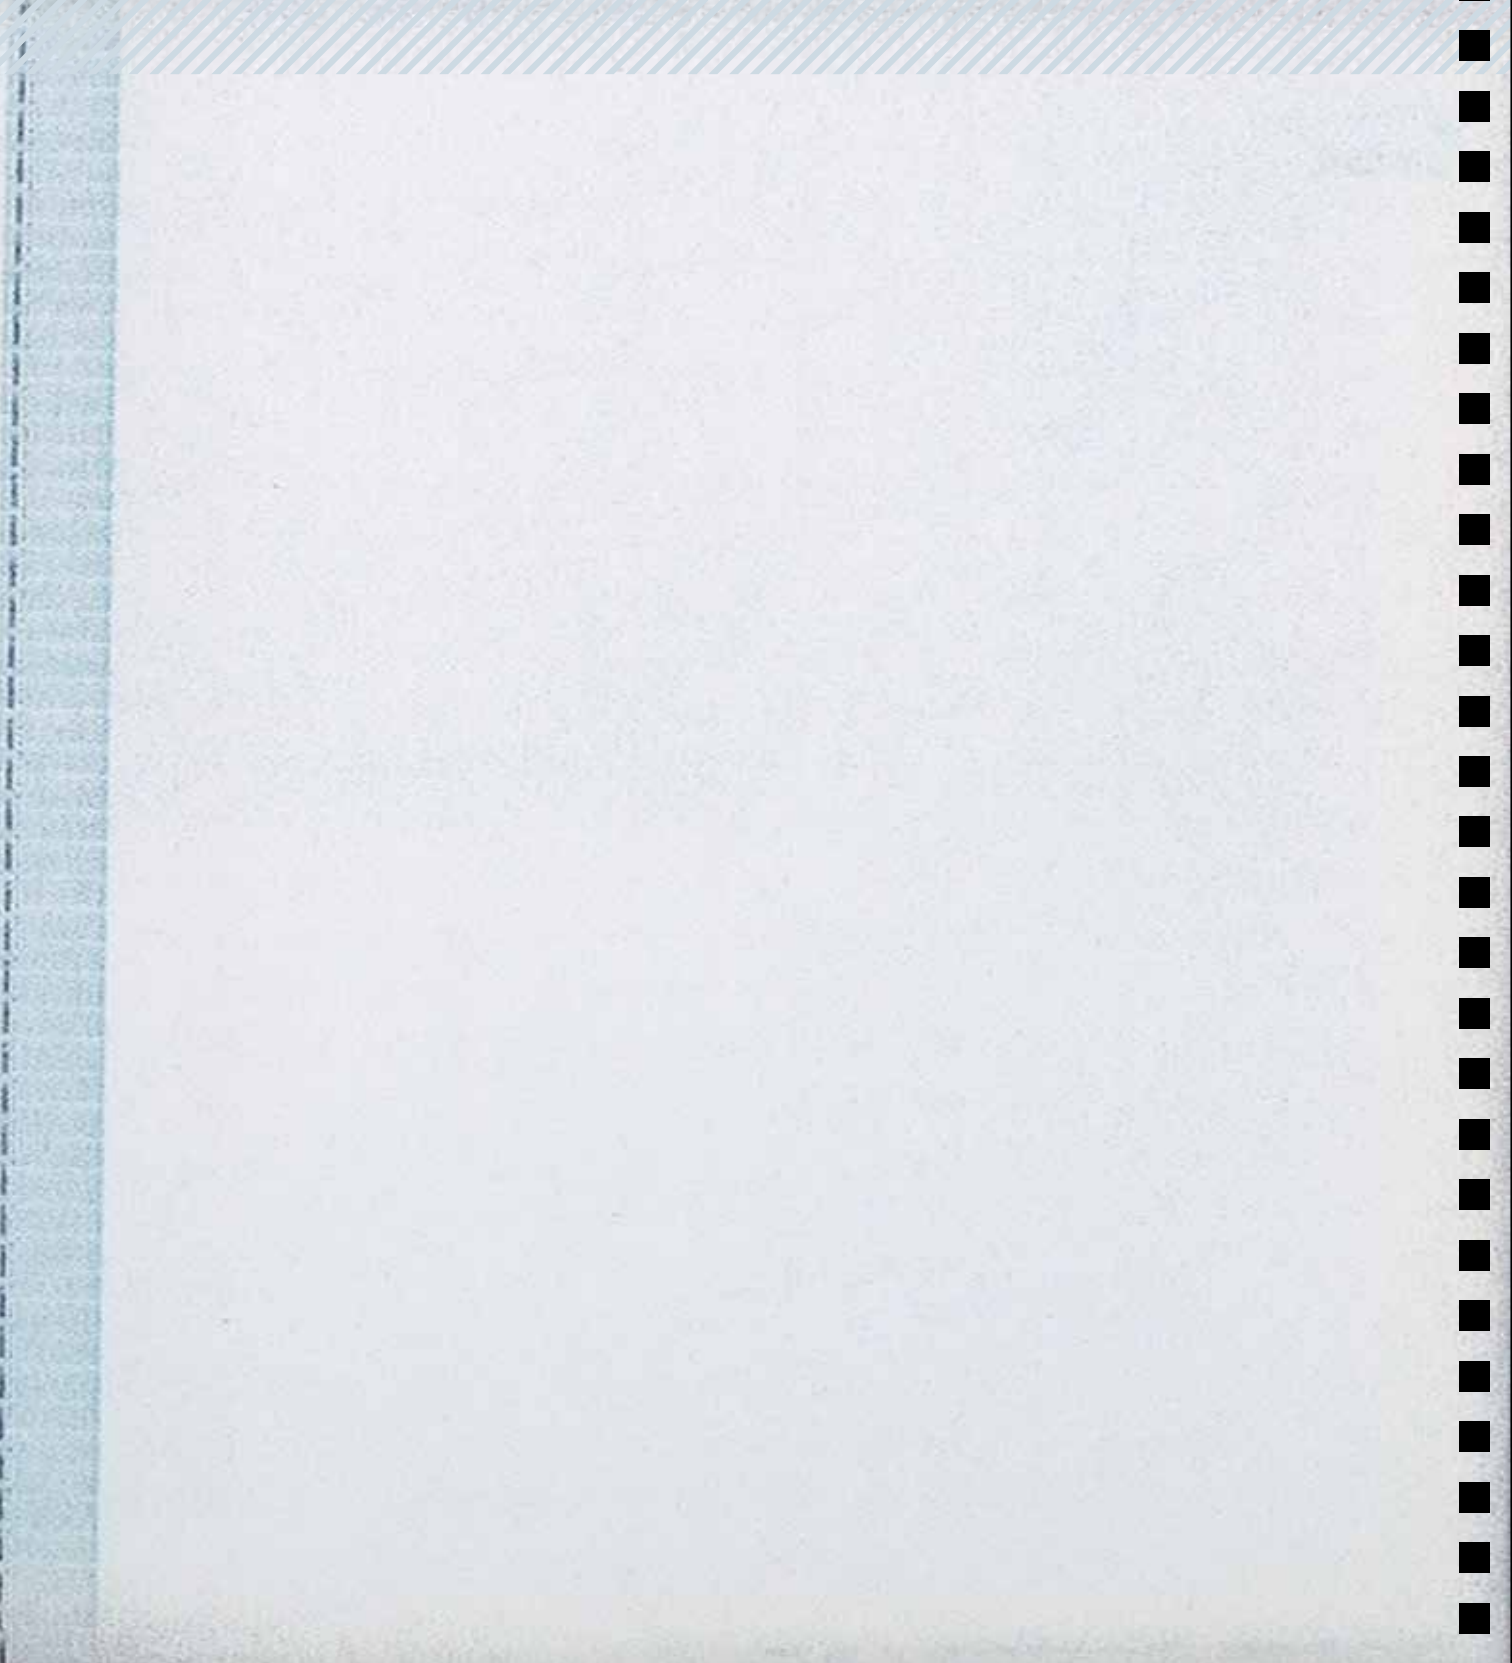

In the following pages you will find a description of our main activities, projects and work programs executed over the past year, as well as a description of the many challenges we still face to further contribute to the consolidation of a fair and equal society that values its biological and cultural diversity.

The year 2013 was overall a positive year. The National Service of Environmental Certification (SENACE) was implemented and it was announced that the country would host the 2014 COP on Climate Change. It was also a year in which illegal mining, despite best efforts, continued to contaminate rivers, poison fish and resources and affect the health and security of individuals. SPDA has committed itself to continue working in support of public policies that strengthen the country's sustainable management institutional structures and discourage and confront activities that impact our environment, health, natural and cultural heritage.

I wish to thank all national and international private and public institutions that joined us and allowed us to work with them during 2013 as well as each working group and the people at the SPDA, who day after day put in the effort, knowledge and the will to further build the country we want.

Pedro Solano
Executive Director
Peruvian Society for Environmental Law

About US

SPDA is a civil non-profit organization, founded in 1986, which has been working continuously in the promotion of environmental policy and legislation in Peru. We have become one of the most recognized organizations in Latin America, specialized in this field. We promote and facilitate the effective implementation of environmental norms and policies, participating actively in policy and technical dialogues, and in certain cases, intervening in the defense of citizen rights. To support public and private management of the environment, we promote the use of specific planning and management tools and we invest in educational and training programs, promoting environmental and social responsibility of companies and other social actors, among other approaches linked to the three elements of sustainable development: environment, economics and social issues. We believe in the decentralization process and the important role of Regional and Municipal Governments in the search for sustainable development. Besides our main office in Lima, SPDA has two decentralized offices in the regions of Loreto and Madre de Dios and undertakes work on a permanent basis in the departments of Amazonas, San Martín and Cusco.

Our mission

We seek to contribute to the generation of a healthier society, in a sustainable, happy and equitable world, where people can value their natural and cultural heritage and live without putting at risk the planet's viability and opportunities for future generations, where different forms of life are considered and valued.

SPDA works along three different strategic lines:

1 Natural heritage

2 Law and governance

3 Environmental justice

Natural heritage

Natural heritage - all components of nature to which we attribute economic or spiritual value - is a driving force for our development as a country, pride and identity. It is part of what we inherit from our ancestors and must be administered with sound criteria to transcend throughout future generations.

We therefore promote knowledge generation and proper use of the natural heritage. Proper use implies, in the majority of cases, the design of conservation strategies, ranging from protection to sustainable use. In other cases, when a natural heritage space is “lost” following different types of decisions, a technical, scientific, legal, economic and/or social analysis is required to justify these decisions. This must go hand in hand with environmental compensation measures, in order to “return” to the natural heritage under some type of established modality.

Some issues included in this approach are: natural protected areas, forests, landscapes, biological diversity, ecosystem services, regional conservation systems, water and territorial or environmental compensation schemes. Also under this line of action SPDA includes agrobiodiversity and traditional knowledge, which integrates and reinforces natural and the cultural heritage.

Law and governance

The construction of a better society requires that its institutions and legal frameworks are solid, fair and transparent. Institutionality relates to structures, processes and norms, both for the public sector as well as civil society. This is the best guarantee for environmental governance.

SPDA supports the development of environmental legislation that is coherent and systematic, based on sustainability principles and permanently updated, according to the dynamics of life itself. We believe that relying on capable and organized institutions is the best guarantee for norms to translate into sustainable management of a territory and offer real opportunities for development. These institutions are found at different government levels and sectors, as well as within civil society.

Some issues included in this strategic action line are: environmental legislation; strengthening the capacities of government institutions through courses, consultancies, agreements and cooperation programs; organizational designs; decentralization; development of civil society networks; civil society strengthening, mainly indigenous groups, through legal and technical advice, courses, publications, communication strategies, events and funding. The sustainable dissemination of Environmental Law is also a priority, as well as working towards strengthening key instruments for environmental governance, such as environmental impact assessments, territorial planning and prior consultation.

Environmental justice

There is the need for good norms and institutions to be broadly understood and implemented. Implementation, monitoring and participation instruments, and eventually defense instruments, may be required, always based on a better understanding of citizen rights in relation to the environment.

Environmental justice seeks to empower citizens and institutions to exercise their environmental rights, in an informed and effective manner.

Some issues or activities included in this strategic action line are: case studies or research products related to emblematic issues such as illegal mining, infrastructure or palm plantations; legal consultancies; participative monitoring and early warning systems; transparency of information; observatories; administrative and legal cases; communication strategies and participation in civil society groupings and network.

Main activities

1

Natural heritage

Natural protected areas and conservation

- * This year, twelve new areas under private and communal conservation were added to the voluntary/private conservation movement in Peru. Of particular importance is the Paraíso Natural Iwirati (Loreto), the first native community to recognize part of its territory as a private conservation area (PCA).
- * Through a Seed Fund which SPDA sponsors, we have provided funding to twelve projects that will increase the conservation coverage by nearly nineteen thousand additional hectares in the national territory. The proposals were selected from a total of thirty-one candidates.

- * Legal and technical advice has been provided to the Historic Sanctuary of Machu Picchu (Cusco), Alto Mayo Protection Forest (San Martín), Illescas Reserved Zone (Piura) and Sierra del Divisor Reserve Zone (Loreto and Ucayali), in order to strengthen management efforts in these areas.
- * Accreditations for twenty-four custodians of forestry heritage, who contribute to the control and supervision of forestry resources in concessions for conservation, ecotourism and other forest products, have been supported.
- * SPDA promoted the creation of the first conservation concession in the Amazonas region, as well as the first proposal presented to the National Service of State Protected Natural Areas (SERNANP) for a regional conservation area (RCA) in the region (Balsas del Marañón).
- * We worked in coordination with SERNANP, the Native Federation of the Madre de Dios River and its Tributaries (FERNAMAD), the Infierno Native Community and Madre de Dios Regional Government, to develop a strategy to secure the demarcation and

registration of ownership title of the Infierno Native Community, maintaining the integrity of the Tambopata National Reserve and its values. The communal territory was formally registered after almost thirty years.

- * The Presidency of the Pacaya Samiria National Reserve Management Committee was given to SPDA. We executed the first proposal of the Sustainable Funding Strategy Management Committee that involved businesses and different actors, in order to consolidate the committee's presence as a key entity for the adequate management of the area.

Environmental compensation

- * We contributed in the design of a legal proposal of guidelines to elaborate and implement the Environmental Compensation Plan from the loss of ecosystems, under the framework of the National Environmental Impact Assessment System led by the Ministry of Environment (MINAM).
- * Together with MINAM and the Wildlife Conservation Society (WCS), a regional workshop was organized focusing on the exchange of experiences regarding environmental compensation policies and standards, and environmental and social impact assessments. The workshop involved the participation of more than seventy participants (representatives of public organizations in Ecuador, Colombia and Chile) with the objective to strengthen the capacities of local authorities on identified issues.

Biodiversity and food security

- * The implementation of 'Rincón del Saber', a small museum located in Unu Urco, district of Calca (Cusco) was initiated. This open space, managed in coordination with a peasant community and youth organization will have an exhibition of infographies on the importance of agrobiodiversity, a reading room, samples of native potatoes and their description, and a small seed bank of approximately five hundred varieties of native potatoes from Calca and surroundings. The inauguration is scheduled for the first half of 2014.

- * We initiated the implementation of the Local Agrobiodiversity Register, a tool that will help to position agroecology, as an alternative for local development. For this purpose, the Platform for the Conservation of Andean Seeds and Tubers (PACTA) – which is part of the AGROECO project in which SPDA is one of the main leading institutions- has committed its participation in developing this register, in order to contribute to its substantive content and provide visibility.

2

Law and governance

Environmental impact assessment

- * We provided MINAM with technical assistance during the initial implementation process of the National Service of Environmental Certification of Sustainable Investment (SENACE). In this regard, we supported this agency in conducting a number of meetings and workshops with different actors, aimed towards working on a review process for administrative procedures as part of the evaluation impact assessment process.
- * Assistance was also provided to implement an internship program between MINAM and the National Authority of Environmental Licenses (ANLA) of Colombia and Environmental Assessment Service (SEA) of Chile, institutions with similar functions to those of SENACE. The exchange helped to learn more on how these institutions were structured and the challenges for SENACE in the future.
- * Through the publication “Promoting environmental investment and management: analyzing Supreme Decree 060-2013-PCM”, we analyzed the positive aspects and disputable points of the norm, and contributed towards an informed debate on this norm that intended to simplify the waiting time for review of environmental impact studies, and by this, contribute to promoting investment in the country.

- * SPDA also presented “Setting the bases for environmental management to guarantee sustainable investments”, targeted at contributing to the reflection and generation of commitments for national processes present in the country for the academic community.

- * We formulated a law proposal for the Metropolitan Municipality of Lima that establishes the procedure to grant environmental certification and environmental monitoring procedures under their competence.

Illegal mining

- * SPDA promoted the correct implementation of norms to regulate mining formalization and the interdiction of illegal mining, through an integrated strategy that includes: the elaboration of public policy proposals, follow up of the formalization process and strengthening the capacity of public institutions at a decentralized level, including regional governments, environmental prosecutors and the Judicial Authority.
- * Together with the CAN General Secretariat, we organized the event “Reflections and exchange of experiences on the problematic of illegal mining in the Amazon Basin”, that brought together experts of six Amazonian countries. The goal: to strengthen capacities and increase the knowledge of public officials on the situation of illegal mining, its expansion and impacts on countries of the Amazon Basin.
- * We analyzed the most important landmarks, as well as the main barriers surrounding policies to regulate mining formalization of artisanal and small-scale mining implemented in Madre de Dios since 2002. The result of the study, to be published in 2014, has helped to strengthen our contributions to the mining formalization process during this year.

- * In this line of work, we offered technical legal advice to regional authorities, in order to stop the negative impact of illegal mining in high value conservation areas such as El Sira Communal Reserve (Pasco, Huánuco, Ucayali) and the Panguana (Huánuco) private conservation area.

Legislation

- * SPDA is working together with SERNANP, to improve their legal framework, offering technical and legal advice on different matters such as: prior consultation, the establishment of regional conservation areas, ecosystem services, REDD, physical and legal formalization of land titles, among others.
- * We continue to work in the elaboration and implementation of financial sustainability mechanisms for voluntary conservation tools, linking them to the National Program for the Conservation of Forests, the tax legal framework, among others.
- * SPDA collaborated in the elaboration of a regulatory proposal modifying the Regulation on Access to Genetic Resources which, among other aspects, incorporates SERNANP as an administrative authority under the access regime the national level. This will allow administrative procedures to be simplified.

- * In order to strengthen the environmental institutionality of the Amazonas Region Government, we provided legal support in the process to create the Regional Environmental Authority (ARA), as well as the design of management instruments.

- * With Earth Justice and the Inter American Association for Environmental Defense (AIDA), we selected international experiences relative to the use of our ocean and its resources. We identified the main problems, and elaborated proposals to improve public policies that will guarantee resources sustainability, as well as fishery management with an ecosystemic approach.
- * At the request of The Nature Conservancy (TNC), we elaborated an analysis linked to a specific regulation applicable to the management of seventy-two of the main species used for commercial purposes in Peru. The results of this study will promote the adoption of urgent specific measures, such as the establishment and control of minimum sizes for all hydro-biological species exploited for commercial purposes.

Forestry and wildlife legislation

- * We participated actively in the definition of the National Forestry and Wildlife Policy in Peru. We additionally followed-up on the establishment of the National Forest and Wildlife Service (SERFOR), an institution that intends to transform public forestry management and raise the level of the sector.
- * SPDA supported the revision and drafting of the project to regulate the new Forestry and Wildlife Law. Our main thrust is to facilitate legal access to the forest and improve forestry governance, mainly in the Amazon.

- * SPDA also provided training on forestry, ecosystem services, among others, for regional authorities, forest users and specific public such as participants in the forestry management committees or ANP. We also improved existing information on our outreach platforms such as the website: www.legislacionforestal.org.
- * We contributed to debate involving REDD+ with publications linked to indigenous peoples and ecosystemic services, monitoring the preparation processes for REDD+, as regards to benefit sharing or social and environmental safeguards. We seek for citizens to be aware of other mechanisms as an incentive to avoid deforestation.
- * Legal support was provided for the Congress of the Republic to elaborate a Draft on Mechanisms for Retribution of Ecosystem Services. This is a key norm as it seeks to consolidate the regulation on ecosystemic services in our country.

Genetic resources

- * SPDA collaborated with MINAM in the elaboration of a GEF proposal regarding the use of genetic resources in our country, for the purpose of consolidating the implementation of the regulatory and normative framework. This project is expected to initiate at the end of 2014.

- * SPDA continued to participate in work sessions of the National Commission against Biopiracy, an entity assigned to the Presidency of the Council of Ministers, formed by public and private representatives and civil society, with the main objective to prevent biopiracy (regarding genetic resources and TK), by evaluating patent applications and by oppositions or presenting nullity actions against patents granted overseas.

In addition, we took part in meetings of the Genetic Resources Technical Group and Agrobiodiversity Technical Group.

Strengthening public management

- * Through fellowship programs we have continued to provide support to different State entities, such as SERNANP, the General Directorate of Forestry and Wildlife, and regional governments of Amazonas, Cusco, Madre de Dios and San Martín, by hiring professionals in law and other disciplines.
- * We strengthened the institutional capacity of regional associations of ecological producers through formalization and provided legal assistance to provincial associations of ecological producers in Calca and Espinar in Cusco; and San Marcos, Bambamarca, Cajabamba y Cajamarca in Cajamarca. We also helped to form the Commission on Food Safety and Sovereignty of the Provincial Municipality of Cusco.
- * Legal advice was offered to different management programs of the Loreto Regional Government, organizing training workshops, and providing with legal opinions on environmental management competences, environmental offences, agrobiodiversity, environmental services, sustainable use of natural resources, among others.
- * To help the process to strengthen capacities of local actors, SPDA has offered local producers the necessary tools to better position their products in various markets through training and the development of a Practical Guide of Collective Marks and Denominations of Origins.

- * SPDA consolidated joint actions with the Peruvian Amazon Research Institute (IIAP) to develop an assessment on agrobiodiversity in the peasant communities of Sapuena and Flor de Castaña en the District of Saquena, Province of Requena (Loreto).

Environmental monitoring

- * SPDA provided MINAM with technical assistance to help strengthen environmental monitoring by formulating a draft proposal to improve the National System of Environmental Monitoring and Assessment (SINEFA). In April 2013, the Congress approved Law 30011 that modifies the SINEFA law and strengthens a number of environmental monitoring aspects in the country and role of the Agency of Environmental Evaluation and Control (OEFA).
- * SPDA contributed with a number of institutional proposals submitted to OEFA and participated in work meetings to debate on the regulatory proposals.
- * Training workshops in the regions of Loreto and Madre de Dios were undertaken to raise awareness about the regulation on environmental monitoring in progress at the national level, in order for regional government officials and interested actors to take these new regulations into consideration.

Prior consultation

- * SPDA created an inter-institutional alliance with CEDA of Ecuador and ASIES of Guatemala, aimed at developing research and promoting and exchange of information process (through lessons and experiences). Through this work - where the Peruvian case is an important reference - we sought to contribute to adequate regulation and implementation of the right to prior consultation for indigenous peoples in each country.
- * In collaboration with the Ministry of Culture, we worked in the design and implementation of a virtual platform on the access to prior consultation. The website is scheduled to be launched in March 2014. With this we support the dissemination of the right to prior consultation for indigenous peoples and its correct implementation.

Environmental management in the private sector

- * SPDA contributed to the improvement of environmental management in the private sector, through permanent legal assistance for Edegel S.A.A. in the course of their operations.
- * Legal advice was provided to Scotiabank Perú S.A. regarding environmental risk management for financial credits granted by the bank. We also participated in a number of events related to evaluating risk management in financial operations and in the application of Equator Principles.

Extractive industries and natural resources

- * SPDA continues to support Aqua-Fondo, a mechanism with private funding that complements efforts of the private sector for ecological and hydrological recovery and conservation of the Chillón, Rimac and Lurin River Basins. In this regard, we designed the legal mechanism to allocate financial resources for the maintenance of these basins.

Climate Change

- * We participated as members of the official Peruvian delegation at the Conference of the Parties COP 19 in Varsovia (Polonia). In a joint effort with other civil society organizations, we provided legal assistance to MINAM in the negotiation processes.
- * After COP 19, we contributed with MINAM to organize the coordination meeting of the COP national delegation.
- * We strengthened the capacity of authorities and local and regional officials regarding climate change matters, through a training course in the framework of the project 'El Clima cambia, Cambia tú También'. This project culminated successfully with a photographic exhibition and the presentation of a documentary on the projects. The Minister of Environment and other high authorities in different sectors participated in these activities.
- * We have an institutional strategy towards the COP 20 to take place in Lima in 2014, which consists in working on outreach activities, technical support to institutions and research.

3

Environmental justice

Legal support

- * Despite strong demonstrations by miners in the Madre de Dios region, SPDA consolidated a free of charge Legal Advice Office in Madre de Dios, through work undertaken with forest users (farmers, nut growers and forest concessionaires), and competent authorities who pursue and sanction environmental offenses. The Legal Advice Office is an important reference for the defense of the citizens environmental rights affected both by illegal mining and other activities that degrade our ecosystem; this is evidenced by the thirty-seven new cases addressed during 2013, which gave rise to three legal actions.
- * Our Legal Office in Loreto has also been reinforced, addressing one hundred and twenty legal consultations in favor of fifty-four beneficiaries, originating ten legal actions. Additionally SPDA initiated procedures to demand the execution of a court order to shut down the Maynas Municipal Landfill, located in the Allpahuayo Mishana National Reserve buffer zone. We conducted several training events to empower citizens to better defend their environmental rights.

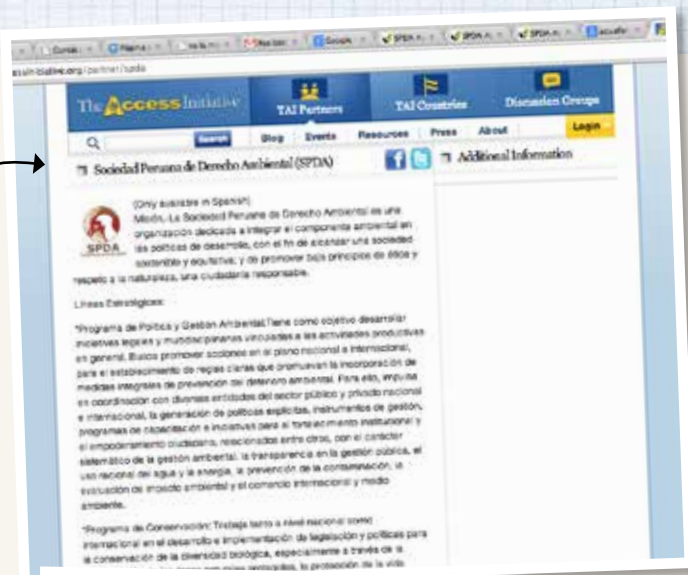

- * We elaborated training material in practical, didactical and innovative formats. Among these, the launch of our Historias Ilustradas, the first number (La Leyenda de los Tumbabosques) provides useful tools to report illegal logging crimes.
- * We also designed an informative pamphlet to explain in ten simple steps the procedures to recognize private conservation areas (PCA). At the request of SERNANP, we elaborated a working document, explaining the new normative framework applicable to PCA.

- * SPDA supported the implementation of private conservation networks in the regions of Amazonas and Loreto. The network has already been established in Amazonas “Network of Biodiversity Conservation in the Amazonas” (Red Bda), a process we have been monitoring since the beginning. Likewise, we supported the process to organize the “Amazon Conservation Network Loreto” (RACOL). We are working in coordination with their representatives, in the search of funding that contributes to the management of private conservation areas and ecotourism concessions.

Access to information

- * Our work continues as part of The Access Initiative (TAI) (<http://www.accessinitiative.org/partner/spda>), the largest global network of civil society organizations that work for citizens to have the right and capacity to influence in decisions over the natural resource in their communities. The members of TAI form coalitions and evaluate the performance of their governments in providing the public with access to information, participation in environmental decision-making and justice when their rights to information, participation and a clean environment are affected.

- * SPDA contributed to organizing the informative meeting (led by MINAM) with regards to the implementation of Principle 10 of the Rio Declaration + 20.
- * SPDA also participated actively in the III Meeting of Focal Points Designated by the Signatory Countries of the Declaration on the Application of Principles 10 in Latin America and the Caribbean which took place in the city of Lima. Guatemala, San Vicente and Las Granadinas adhered to the Declaration. The meeting agreed to further discuss the feasibility of developing a regional instrument on the right to access - in terms of environmental matters.

Information management and citizen empowerment

- * Through the Cambia.pe project (an information website on climate change) we supported various initiatives of civil society that seek to create awareness on climate change threats and opportunities. The Cambia.pe team also participated in events such as: Friendly Camp (September 21st), the Eco Fest (November 7th) and InterClima (December 4th, 5th and 6th).
- * Along these lines and with the goal to provide citizens with information regarding climate change threats and possibilities, last year Cambia.pe elaborated more than two hundred press reports and ten video clips which were published on its website. The animated video "What's going to happen now" deserves special attention, as it mentions the challenges and answers of our communities in the face of climate change. The video reached more than ten thousand visits during the first week.

- * The SPDA news portal Actualidad Ambiental continued to provide information on the main environmental news events in the country. More than three hundred news reports were presented, and close to twenty videos. This year, the different content elaborated for our website was visited more than two hundred thousand times.

* The interview program *Actualidad Ambiental TV*, continued its edition during the year through the Internet, in alliance with *La Mula* website (www.lamula.pe), one of the most influential websites in the country. To date, thirty-five interviews have been conducted; amongst them, Marc Dourojeanni (PERU), Gerardo Honty (Uruguay), Manuel Rodriguez Becerra (Colombia), Ricardo Abramovay (Brazil) and Marina Silva, the presidential candidate of Brazil.

* Working with the press is essential for promoting socialization and debate on information related to the process of empowering citizens in the context of environmental justice. Therefore, work has been undertaken jointly with the main media in the country. Over the past year, more than ninety press notes were published in newspapers, magazines, television and websites, based on contributions and opinions of SPDA experts.

* Creating capacities among journalists at the national and regional levels is a priority. Therefore, through the Climate & Development Knowledge Network (CDKN), and action of Instituto Prensa y Sociedad (IPYS), a project is being developed to strengthen the abilities and knowledge of research journalists on issues linked to sustainable development and climate change. In this context, online workshops were conducted during the year, and a special on-site workshop in the city of Bogotá (Colombia).

- * As a result of this project, support was provided for five of the most important research journalists in Latin America. They published articles in the media such as the newspaper El Comercio (Peru), magazine Semana (Colombia), newspaper Página 7 (Bolivia), magazine Vistazo (Ecuador) and magazine Poder (Peru).
- * Additionally, through the Regional Communications Coordination of CDKN, led by the Communications Program of SPDA, the communication capacities of various project members in Latin America and the Caribbean have been strengthened (incidence and strategy).
- * A Communication Strategy is being implemented with the purpose of disseminating the work carried out by the Management Committee of the Pacaya Samiria National Reserve (Loreto) targeted towards positioning this group as a supporting entity for the natural protected area and its activities for the sustainable management of natural resources.
- * Through the “We Conserve by Nature” initiative, we have supported voluntary conservation projects and encouraged sustainable life models. Twenty new videos were elaborated and thirty-five chronicles, disseminated in festivals all across the country, on the website and different media (magazines Vamos!, Rumbos, Aqua, the television program AmbienTv or Canal Sur Peru, United States).
- * With the goal to add more adherents to the movement “We Conserve by Nature”, SPDA organized five events to present new conservation “routes”. These events took place in Lima, Iquitos, Chachapoyas and Moyobamba. Additionally, we gave lectures in schools and universities.

* During the second half of the year we organized the festival We Conserve by Nature in the Lima Art Museum; the Ecofest 2013 together with the magazine Asia Sur; and the festival of documentaries Kuyapanakuy in UVK cinemas at Larcomar, co-organized with Patagonia. In all these events that managed to gather more than four thousand people, we organized activities that allowed us to raise enough funds and donate binoculars to the owners of Asociación Bosques del Futuro – Ojos de Agua, PCA Gotas de Agua and PCA Bosque Berlín. Help was provided to commercialize in Lima handicrafts from Puerto Prado; honey from PCA Bosque Berlín; organic panela from PCA Hierba Buena Allpayacu; and blankets from PCA Huaylla Belén Colcamar.

* In this context, SPDA also organized the first citizen campaign for beach cleaning at a national level “Hazlo por tu playa” together with Life Out of Plastic (L.O.O.P.) The initiative gathered more than one thousand volunteers in the country, who cleaned sixty-seven beaches along the entire coast and port in Iquitos, collecting a total of fourteen tons of solid waste.

How is this accomplished?

SPDA is organized in five thematic work programs, three crosscutting units, two decentralized offices and a special project or initiative.

International Affairs and Biodiversity Program

The International Affairs and Biodiversity Program participates actively in the creation and promotion of mechanisms that allow for the effective implementation of different international agreements. It proposes options and alternatives for the implementation of these norms at the international, regional and national levels.

Additional, it participates in the elaboration and promotion of environmental legislation on matters such as: genetic resources, biodiversity, biotrade, agrobiodiversity, traditional knowledge and climate change, ensuring that the interests of different social actors, mainly indigenous peoples, are recognized.

Citizen and Socio-Environmental Affairs Program

The objective of the Citizen and Socio-Environmental Affairs Program is to encourage that decisions regarding natural resources conservation and development are made in accordance to social and environmental considerations, respecting citizens' rights, and with long-term national interest criteria.

It also seeks to empower citizens in the use of legal and media tools to access environmental justice, and exercise their right to a healthy environment.

Conservation Program

The Conservation Program works at the national and international level in the development and implementation of legal instruments for the conservation and sustainable use of biological diversity, mainly through the establishment and management of natural protected areas, the promotion of private and communal conservation and management of non-timber forest resources.

Its objective is to contribute to a country that values and sustainably uses its natural and cultural heritage

Environmental Policy and Management Program

The Environmental Policy and Management Program encourages and contributes to the development of public policies and legal tools aimed towards improving integrated management and environmental institutionalality in Peru, promoting sustainable development based on a trans-sectorial and decentralized approach.

The Program seeks to consolidate integrated environmental public policies, consistent with sectorial, regional and local policies, as well as promote responsible and informed dialogue with civil society on key issues such as natural resources, extractive industries and productive activities, strategic environmental evaluation, territorial planning, environmental impact evaluation and environmental monitoring, citizen participation, prior consultation, among other priority issues in the national environmental agenda.

▶ SPDA Madre de Dios

The SPDA Madre de Dios decentralized office was created in 2006, under the premise and spirit of contributing to the decentralization process, through capacity building and supporting environmental management. Along the same line, legal and technical advice was provided in 2013, contributing to the development of human capital of the Regional Government, base organization and the local community of the region. Additionally, the Office participates actively in private and public coordination spaces and remains an important regional support organization for environmental matters.

SPDA Loreto

Since 2006, the SPDA Loreto Decentralized Office is recognized for providing legal advice, support and contributions on environmental issues, to different institutions (public and private), as well as natural persons. Throughout this time, the Office has engaged in different activities with the goal to secure the protection and management of natural heritage, improve regional environmental standards and strengthen regional institutions, implement conservation tools, defend citizen environmental rights and generate research with a regional perspective to guide us through our daily tasks.

We Conserve by Nature (Initiative for Private and Communal Conservation)

The Initiative for Private and Communal Conservation is a platform of activities created to support and promote conservation and the sustainable use of areas and resources by civil society, providing them with legal security. At the same time, it contributes to increasing the coverage of protected sites in the country, by adding effective and improved conservation mechanisms.

The main lines of action are the promotion and dissemination of legal instruments that support private and communal conservation; also the generation of dialogue spaces to facilitate the channeling of implementation proposals and improve legal and institutional frameworks. This work is achieved by organizing courses, workshops and forums, through publications and promotional material, providing legal and technical advice to possible interested groups, and the direct support from the Seed Fund for the development of new experiences.

Initiative for Conservation in the Andean-Amazon (ICAA) - Support Unit

The Initiative for Conservation in the Andean-Amazon (ICAA) – Support Unit is a long-term regional program created by the United States Agency for International Development (USAID), which brings together and integrates the efforts of more than thirty partner organizations, both local and international, to strengthen conservation of the Amazon biome in Colombia, Ecuador, Bolivia and Peru.

ICAA objectives are: to contribute to reducing the rate of deforestation and biodiversity loss; ensure that key aspects of natural resource governance function more effectively and improve the quality and sustainability of the livelihood of Amazonian populations. Through this Initiative, USAID reaffirms its commitment to conservation and sustainable development in the Andean Amazon region.

The Support Unit is lead by the Resources Group (IRG), and is formed by the Peruvian Society for Environmental Law (SPDA), Social Impact (SI), Environmental Law and Management Corporation (ECOLEX), Natural Heritage Fund (NHF) and World Wildlife Fund (WWF).

Main activities 2013 (ICAA-SU)

Natural resources and governance

- ICAA elaborated a baseline report on territorial conflicts for Sucumbios, Napo, Orellana and Pastaza (Ecuador) and Madre de Dios (Peru). These documents will help to identify conflicts related to overlapping the rights of third parties with indigenous territories, as well as design and implement conflict resolutions strategies in selected landscapes. The same line of work will be undertaken in Ucayali (Peru) and Piedemonte (Colombia).
- More than two hundred public officials among prosecutors, judges and other State representatives at the national and subnational levels underwent training on environmental law, environmental offences and regulations for illegal mining. ICAA contributed to training efforts with the second edition of the Guide to understanding small-scale mining and artisanal mining, and legislative decrees related to illegal mining in Peru, that was distributed to government agencies involved in these matters.
- Three indigenous women who participated in the training workshop on indigenous rights and natural resources replicated everything learned in their communities. They trained seventy-seven people during five workshops, making use of material prepared by SU for this purpose: videos, flip charts, manuals and pamphlets, among others.
- ICAA also implemented two mechanisms to facilitate the access of people, mainly indigenous and those in rural communities, to environmental legal services: a radio program in Peru to inform the people of their environmental rights; and Línea Verde, a telephone service for legal consultations in Ecuador, that has already attended sixteen phone calls and provided assistance for two environmental claims: one from the Municipality of Puyo against an auto repair service due to contamination; the other from the Ministry of Environment against a resident in Archidona due to illegal logging.
- Finally, to improve transparency in decision-making, ICAA contributed to strengthening the capacity of indigenous peoples, indigenous organizations and civil society organizations on public policies, indigenous environmental rights and environmental legislation, and promoted the dissemination of information through reports and dialogue. It also supported the Permanent Inter-institutional Coordination Table in the Amazon (Colombia); and Regional Monitoring Group for Megaprojects in Ucayali (Peru), as well as organized a workshop Analysis of the Implementation and Impacts of Infrastructure Projects in the Andean Amazon, where more than 30 regional organizations participated.

Economic Incentives for Conservation (EIC)

- The production and dissemination of information on EIC has increased through the publication of documents on Economic Incentives for Conservation, a conceptual framework, of which more than seven hundred copies were handed out to government officials, universities, NGOs and representative organizations for indigenous peoples in Colombia, Ecuador and Peru. The book is available in digital format on the ICAA website (<http://www.amazoniaandina.org/amazonia-activa/biblioteca/publicaciones/incentivos-economicos-paraconservacion-un-marco-conceptual>).
- The leaders of indigenous communities were provided with training through training workshops; they were provided with material specifically developed for this purpose: the flip chart (in three parts) on climate change, EIC programs and the participation of indigenous peoples in the EIC programs; and radio micro- programs, elaborated in coordination with COICA and validated by the participants of indigenous exchanges (CEIC).
- A process was initiated to generate information on decision-making and formulation of public policies related to the conservation of biological diversity in the Andean Amazon, through the elaboration of an analysis on economic and tax incentives impacting the biodiversity of Colombia, Ecuador and Peru, in alliance with GIZ and CEPAL. Technical assistance was provided to the Ministry of Environment in Peru on the issue of payments for hydrological environmental services (PHES), by means of an International Workshop on Benefit Sharing Mechanisms. A workshop was realized to present conservation tools for the Cumbaza River Basin in collaboration with the Regional Government of San Martin and TNC.
- The capacity of indigenous leaders and community members was improved in their use of EIC programs, with a workshop Sharing Indigenous Experiences: life plans and economic incentives for conservation that included the participation of indigenous leaders of Colombia, Ecuador and Peru. COICA was provided with technical assistance in the development of the indigenous REDD+ proposal.
- In order to integrate ecosystem services into development planning, ICAA organized together with GIZ, a workshop incorporating the value and characterization of ecosystem services into local planning using TEEB mechanisms, in Tarapoto (Peru) and Bogota (Colombia). Sixty-two government officials participated from countries working with the ICAA.

→ To improve policies and legal conditions on EIC, ICAA offered support to the Ministry of Environment and Sustainable Development of Colombia to analyze monetary and tax incentives, and identify reforms. The Provincial Government of Sucumbios in Ecuador was also provided assistance in the implementation of the ordinance on environmental management that recognizes and values ecosystems services and includes EIC programs, as a potential source for funding conservation. MINAM Peru also received assistance for the revision of proposals regarding the Law on Environmental Services, in debate by the Environmental Commission of the Congress.

Research and analysis

→ As a result of expert panels organized by ICAA during the Meeting for Members of ICAA II in August, Cuenca, Ecuador, one hundred and twenty participants improved their knowledge on key matters to support conservation in the Amazon such as: biodiversity, indigenous peoples, gender and investments in infrastructure megaprojects. In addition, the ICAA scholarship program has supported fourteen researchers of the Andean Amazon, who received training on tools for economic analysis to manage the pressures influenced on the region. Five researchers of the first stage have already finished their investigations, and nine more have been selected for the second stage of scholarships to be implemented soon.

Accounting and Administrative Unit

The strengthening of the Administration and Control Unit (that integrates the subunits of Accounting, Logistics, Treasury and Administrative Services) helps to ensure the efficient use of physical and financial resources, through joint work with the Executive Directorate, SPDA Programs and the Project Management Unit.

SPDA projects

executed during 2013

Project	Funding source	Enforcement time	Objective
Towards a new paradigm: Rights and Obligations on the Access and Use of Natural Resources in Peru. An approach from Civil Society.	Belgian Development Cooperation	December 2009 - February 2013	Generate a process for participation, dialogue and reflection with society and in different regions of the country, regarding public policies and the constitutional and legal regime on access and use of natural resources in Peru.
Participative and Inclusive Territorial Management in the Transboundary Zone of Madre de Dios, Peru and Pando, Bolivia.	CESVI through the European Union	June 2010 - April 2014	Contribute to improving good governance in the South Amazon region in Latin America and guaranteeing an adequate environment for future generations.
Action Plan for the Consolidation of the Tambopata National Reserve Buffer Zones.	Southern Interoceanic Initiative - iSur	May 2011 - July 2013	Strengthen the governance for conservation in the Tambopata National Reserve Buffer Zones.
Supervision and Control by OEFA: key factors for efficient legislation, environmental policy and natural resources in Peru.	Belgian Development Cooperation	October 2011 - October 2014	The National System of Assessment and Environmental Control (SINEFA) in Peru is an efficient and credible objective before the public and private actors, considering the context of promoting investments in Peru.

Project	Funding source	Enforcement time	Objetive
Strengthening the Management Committee of the Pacaya-Samiria National Reserve.	ProNaturaleza Peruvian Foundation for the Conservation of Nature	February 2011 - October 2014	Contribute to improving the effective and participative management of the Pacaya-Samiria National Reserve.
Intensification of Small-Scale Farming in the Andes of Peru.	International Development Research Center (IDRC)	March 2011 - August 2014	Increase food security for small-scale farmers in Peru, through the improved conservation and management of Andean roots and tubers, and the promotion of highly nutritional native vegetables.
Consolidation of protected areas and regional conservation systems in the Peruvian Amazon, and contribute to strengthening local governance, territorial planning and legal framework for conservation.	Gordon and Betty Moore Foundation	November 2011 - October 2014	Monitor and implement conservation and management units focusing on the regional systems of protected areas in Amazonas, Cusco, Loreto, Madre de Dios and San Martín, in a context of decentralization, reducing the effects of climate change.
Biodiversity, livelihoods of the local people and governance of landscapes in Loreto and Manu Tambopata.	Wildlife Conservation Society (WCS)	October 2011 - September 2015	Improve the quality of life for rural populations, biodiversity conservation and promote the use of natural resources in two of the important ecological landscapes in the Andean Amazon: Loreto and Manu Tambopata (Peru).
Proposals to improve the National Environmental Impact Evaluation System (SEIA) related to Andean Amazon river basins.	Wildlife Conservation Society (WCS)	November 2011 - October 2013	Generate critical knowledge based on scientific studies on the dynamics of water, basins, wetlands and aquatic diversity in the river basins of Inambari and Madres de Dios, to be used in the development of policies that will improve the SEIA framework, strategic environmental evaluation and the mitigation of impacts, both for Inambari and other river basins in the Andean Amazon.
Strengthening the Implementation of Regimes on Access to Genetic Resources and Benefit-Sharing in Latin America and the Caribbean.	Global Environmental Facility (GEF), through the International Union for Conservation of Nature - IUCN	January 2012 - March 2014	Strengthen national capacities of eight countries in the Latin American and Caribbean regions, to implement and/or comply with policies and legal frameworks related to the access to genetic resource, benefit-sharing and protection of traditional knowledge.

Project	Funding source	Enforcement time	Objective
Consolidating the management of the Alto Mayo Protection Forest (BPAM) through the implementation of management tools, to promote the governance of the Natural Protected Area (NPA).	Conservation International	February 2012 - February 2014	Promote management tools to allow the adequate management of the Alto Mayo Protection Forest (BPAM) for the protection and recovery of its forest, strengthening the capacity of the National Service of Natural Protected Areas (SERNANP) and involving the direct participation of local actors directly related to NPAs.
Protecting the natural heritage of the Peruvian Amazon. Strengthening governance, management and public awareness.	Blue Moon Fund	August 2012 - July 2015	Implement conservation strategies in the Peruvian Amazon. Contribute to the reduction of overlapping conflicts over existing rights. Propose alternatives to improve the legal framework of large- scale economic activities.
The climate is changing and you can too: Options for climate change adaptation and mitigation from the perspective of indigenous peoples and local communities in response to biological diversity.	International Union for Conservation of Nature - IUCN SOUTH	January 2010 - July 2013	Generate recommendations on the options for climate change adaptation, based on the contribution of knowledge from indigenous peoples and local communities on the use of biodiversity, and turn them into elements to create public policies and normative frameworks based on the reality.
Agrobiodiversity Management Models to promote Food Security.	European Union - Welthungerhilfe - WHH Institute for Development and Environment - IDMA Asociación ARARIWA	September 2012 - August 2015	Peasant and native communities in the regions of Cusco, Huánuco, Iquitos and Lima achieve social inclusion, food sovereignty and environmental conservation.
Assisting the Ministry of Environment in the progressive implementation of the National Service of Environmental Certification for Sustainable Investments (SENACE): towards integrated strengthening of the National System for Environmental Impact Assessment (SEIA) in Peru.	WCS - Gordon and Betty Moore Foundation	November 2012 - May 2013	Contribute to the Ministry of Environment with technical assistance for the progressive implementation of SENACE; a process that will be led y the Ministry. The objective is to improve present deficiencies in the environmental impact evaluation processes of investment projects in the country and in this way, contribute to the reduction of environmental problems and generation of social conflicts.

Project	Funding source	Enforcement time	Objetive
Illegal mining in the Amazon Basin: sharing experiences that allow to identify and face an illegal activity.	AVINA Foundation	December 2012 – February 2014	Contribute to sustainable development in the Amazon, facing illegal mining through the generation of shared information in order to increase debate on the situation of illegal mining and impacts in prioritized countries, as well as current legal frameworks; identifying lessons learned and good practices that may be replicated.
Strengthen the access to environmental justice in order to deter illegal activities that are a threat to forest conservation and biological diversity in Southern region of Peru.	The John D. and Catherine T. MacArthur Foundation	January 2013 - December 2015	Face the social and economic dynamics that erode tropical forests and biodiversity in the Madre de Dios region, strengthening access to environmental justice with a view to deter illegal activities that threaten the forests and promotion of biodiversity conservation.
Payments for environmental services in Latin America.	Forest Trends	January - December 2013	Identify and visualize with a journalistic approach the experiences on ecosystem services in Latin America.
Supporting conservation strategies of sites and species in Lambayeque and Ica.	ROYAL BOTANIC GARDENS - KEW	April 2013	Provide technical assistance specifically to the KEW program in Peru: in the process to recognize a PCA in Lambayeque; design a conservation and restoration strategy for relict forests in Ica; facilitate the acquisition of permits for the collection and export of species to the UK; support the design of the strategy and facilitate obtaining permits to establish a seed bank for use in restoration processes in Peru.
Reflection and exchange of experiences on the problematic of illegal mining in the Amazon Basin.	AVINA Foundation	April - August 2013	Recognize the situation of illegal mining, its expansion and impacts on the Amazon Basin, through the exchange of information and experiences of public and private initiatives in different countries.
Consolidation of the Manu Tambopata Conservation Corridor to mitigate the conservation of forests in Madre de Dios, Peru.	Association for the Conservation of the Amazon Basin (ACCA)	May 2013 - March 2014	Implementation activities related to resolution of conflicts from the use of land, and strengthening capacities of the projects beneficiaries and officials of the Madre de Dios Regional Government, supporting conservation of Corridor "Los Amigos Tambopata" (presently, Manu - Tambopata).

Project	Funding source	Enforcement time	Objective
Elaboration and implementation of a regional communications strategy for CDKN in Latin America and the Caribbean.	Climate Development Knowledge Network - CDKN	June 2013 - March 2014	Coordination and management strategy of communications for CDKN activities in Latin America and the Caribbean.
Support the strengthening of civil society actors for the conservation of Purús - Manu Conservation Corridor.	World Wildlife Foundation - WWF	November 2013 - February 2014	Enable the MABOSINFRON Association in charge of "Rio la Novia" conservation concession, with the elaboration of a management plan for the concession in parallel with a planning and operational strategy aimed towards ensuring the viability of medium and long term conservation objectives.
Strengthen the Environmental Impact Assessment System at the national level for large infrastructure projects in Peru, including consolidation of the National Environmental Certification Service for Sustainable Investments (SENACE).	Gordon and Betty Moore Foundation - WCS	November 2013 - September 2015	Strengthen the Environmental Impact Assessment System at the national level for large infrastructure projects in Peru, including consolidation of the National Environmental Certification Service for Sustainable Investments (SENACE).
Managing the Fund for Publications of Climate Development Knowledge Network (CDKN) for Latin America and the Caribbean.	Climate Development Knowledge Network - CDKN	March - November 2013	Contribute to knowledge transfer for member countries of CDKN in Latin America and the Caribbean, through publications that promote climate compatible development.
Strengthen regional communications on Climate Change and Development in Latin America and the Caribbean.	Climate Development Knowledge Network - CDKN	February 2013 - February 2014	Strengthen regional communications on Climate Change and Development in Latin America and the Caribbean through an innovative and varied communication strategy.
Participative monitoring and early warning for the effective response to threats against the forests in Madre de Dios. Phases I and II.	-	November 2012 - October 2014	The project will ensure coordinated work among actors already working with SPDA: forest custodians, the Madre de Dios Regional Government - GOREMED y forest users affected by illegal activities.
Participative monitoring and early warning for the effective response to threats against the forests in Madre de Dios. Phase II.	-	October 2013 - October 2014	The project will seek to consolidate participative monitoring as a tool to facilitate the access to environmental justice for communities affected by illegal activities in Madre de Dios.

Project	Funding source	Enforcement time	Objetive
Contribution to strengthen private and communal activities: We Conserve by Nature.	SCOTIABANK	September 2012 - May 2013	Contribute in the implementation and improvement of management tools for private and communal conservation, to consolidate the sustainable use of natural resources in such areas. Support five private Voluntary Conservation initiatives through the Sixth Edition of Fondo Semilla.
Analysis to reform anchovy fishing in Peru.	EARTHJUSTICE	May 2013 - January 2014	Analyze the legal situation and governance of the fishery sector in Peru, specifically anchovy fishing; and propose the necessary reforms for fishery management with an ecosystemic approach.
Analysis of funding mechanisms for forest carbon.	Forest Trends	February - May 2013	Legal and tax analysis on funding mechanisms for forest carbon.
REDD+ Initiative (Reducing Emissions from Deforestation and Forest Degradation).	Forest Trends	February 2013 - July 2013	Financial follow-up of funds that reach the country to implement REDD+.
Develop the capacity of officials in the Madre de Dios Regional Government (GOREMED) to manage and resolve the problems of artisan and small-scale mining.	Geological Survey of Finland - GSF	July 2013 - January 2014	Elaborate a diagnosis of roles and conditions for women and children in activities related to the extraction of gold in Madre de Dios.
Facing illegal mining from a local to international approach.	-	September 2013 - September 2014	Generate information that enables the understanding of the social and economic dynamics of illegal mining activities in 6 prioritized zones in the country that integrate the Amazon Basin.
Analysis of specific drivers of deforestation in Peru.	Natural Resources Defense Council	October - December 2013	Analysis of two specific drivers of deforestation in Peru: illegal mining and monoculture oil palm.
Application of information economy for the valuation of genetic resources.	International Development Research Centre	January 2014 - August 2014	Demonstrate the need and implications from applying from an information economy perspective when valorizing genetic resources.
Support to reform the forestry sector in Peru.	Peru Forest Sector Initiative	June 2012 - August 2013	Strengthen State institutions for the implementation of their functions in the framework of reforming the forestry sector in Peru.

Agreements

with Government Organizations and Cooperation Fellows Programs

Since its foundation, SPDA has worked in close collaboration with government organizations, providing technical and legal assistance at their request, strengthening their own capacities and in general, supporting the processes to guarantee a healthy environment and appropriate legislation and institutionalization. The objective of the SPDA Cooperation Fellows Program is to strengthen the capacities of public institutions, by offering technical assistance from hired experts, and provide specific and temporary services within government institutions, under frameworks defined in the cooperation agreements.

Marca Colectiva

Denominación de Origen

"Frutas de la Tierra" es una Marca Colectiva

"Pisco" es una Denominación de Origen

¿Qué es?
Es un signo que identifica productos y servicios que tienen un origen geográfico, como el origen de la producción, como el origen de la producción.

¿Puedo utilizarla?
Si Si eres propietario de un producto o servicio que tiene un origen geográfico, puedes utilizarla para identificarlo y protegerlo.

¿Qué derechos me da?
10 años El titular de una marca colectiva o denominación de origen tiene el derecho de utilizarla por un periodo de 10 años.

¿Qué es?
Es un signo que distingue productos que tienen una característica o calidad que depende de su origen geográfico.

¿Puedo utilizarla?
Si Si estás en un área de producción tradicionalmente reconocida, puedes utilizarla para identificar tus productos.

¿Qué derechos me da?
10 años El titular de una denominación de origen tiene el derecho de utilizarla por un periodo de 10 años.

El presente informe es una publicación de la SPDA, elaborada con el apoyo de los organismos mencionados.
